

Computer

Basics Assignment

Questions

Assignment Answers

1. What is a Computer?

Ans. A computer is an electronic device that stores and processes data , often in binary form , in accordance with commands from a variable programme.

2.What is RAM?

Ans. Random-access memory (RAM) is a form of computer memory that can be read and changed in any order, typically used to store working data and machine code.

3.Where is data stored in a computer?

Ans. All data stored on storage media, such as hard disk drives (HDDs), solid state drives (SSDs), external hard drives, USB sticks, and SD cards, can be converted into a series of bits, also known as binary digits.

4.What is that input device used to type text and numbers on a document in the computer system?

Ans. The keyboard is an input device that allows you to enter letters, numbers and symbols into your computer.

5.What are the output devices?

Ans. An output device is any piece of computer hardware equipment which converts information into a human-perceptible form or, historically, into a physical machine-readable form for use with other non-computerized equipment. It can be text, graphics, tactile, audio, or video. Examples include monitors, printers, speakers, headphones, projectors, GPS devices, optical mark readers, and braille readers.

6.Which is the input device that allows a user to move the cursor or pointer on the screen?

Ans. Mouse is the input device that allows a user to move the cursor or pointer on the screen.

7.Which language is directly understood by the computer without a translation program?

Ans. Machine language is directly understood by the computer without a translation program.

8.What are input devices?

Ans. An input device is a piece of equipment used to provide data and control signals to an information processing system, such as a computer or information appliance. Examples of input devices include keyboards, mouse, scanners, cameras, joysticks, and microphones.
